

TEST REPORT N. 23/000013161

THIS CANCELS AND REPLACES TEST REPORT N° 22/000694275
date of issue 11/01/2023

Customer ID 0070488/002

Messrs
isiBisi
1502 NORTH COLLEGE AVENUE
INDIANAPOLIS, 46202
US

Sample information

Acceptance number 22.544199.0001
Delivered by The Customer on 29/11/2022
Receiving Date 29/11/2022
Place of origin isiBisi 1502 NORTH COLLEGE AVENUE INDIANAPOLIS, 46202 US
Sample Description PASTA SECCA SENZA GLUTINE - PENNE RIGATE L.22271

Sampling information

Sampled by Customer

ANALYTICAL RESULTS

	Value/ Uncertainty	Unit of measure	LoQ	LoD	Start/end date of analysis	Op. units	Row
ON SAMPLE AS IT IS							1
GLUTEN (GLIADIN) ELISA Met.: MP 0340 rev 18 2022	< LoQ	mg/kg	5,0		05/12/2022- -06/12/2022	01	2

Operative units

Unit 01 : Via Fratta Resana (TV)

Information on test methods and/or requirements/specifications

Row (2) - Method: MP 0340 rev 18 2022 = Mérieux NutriSciences Italy appears in the list of laboratories recommended by ASSOCIAZIONE ITALIANA CELIACHIA (AIC) and authorized by FEDERACIÓN DE ASOCIACIONES DE CELIACOS DE ESPAÑA (FACE) for the analysis of gluten quantification on foodstuffs.

Gluten Ridascreen Gliadin (R7001) Anticorps R5/extraction MENDEZ.

Information provided by the client

Sampled by: Customer
Place of origin: isiBisi 1502 NORTH COLLEGE AVENUE INDIANAPOLIS, 46202 US
Description: PASTA SECCA SENZA GLUTINE - PENNE RIGATE L.22271

- The line marked by a star (*) is not accredited by Accredia, member of MLA. - If not otherwise specified, the uncertainty is extended and has been calculated with a coverage factor k=2 corresponding to a probability interval of about 95%. - LoD is the detection limit and identifies a confidence interval of zero with a probability interval of about 99%. - LoQ is the limit of quantification. "n.d" is not detected and indicates a value inferior to the LoD. "traces (X)" means a value between LoD and LoQ, this value is indicative. "<x" or ">x" indicate inferior or superior to the measurement field of the test. - If not differently specified, the sums are calculated by lower bound criteria (L.B.). - Analysis Starting date: date at which the sample is processed by the laboratory. Can include aliquoting and homogenization steps. Analysis End date: date at which the results are approved in LIMS by the laboratory. - In case of alteration of the sample the laboratory declines any responsibility on the results that can be influenced by the deviation in case the customer asks for the execution of the test anyway. - If the sampling is not carried out by the laboratory staff, the results obtained are considered referring to the sample as received and the laboratory declines its responsibility for the results calculated considering the sampling data provided by the Customer. The name and contact information of the Customer are always provided by the Customer. - For quantitative microbiological tests in the food chain, the expanded measurement uncertainty has been estimated in accordance with ISO 19036 and is based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95%. Combined standard uncertainty has been taken as equal to the intralaboratory reproducibility standard deviation.
